## **THE INFORMATION TECHNOLOGIES VALUE FOR DIVERSE FIELDS OF ACTIVITY**

Stud. A.M. Genik

Scientific assistant professor Y.G. Stezhko  
Kyiv National University of Technology and Design

Imagine your life without the evolution of technology. What kind of life do we have right now? The development of the new technology helps people to save their lives. It helps people to make a work easier and makes the world better to live. But the most important changes are occurring with a sphere of information.

### **The Importance for Education**

Education is developing very fast now. Now professors can use projectors as their teaching tools etc. Remember that the learning capabilities of people vary from audio to visual. Visual presentation through technological devices allows professors to make visual learners easy to understand. In the same manner, teachers can easily lessen the load of work they need to do when preparing their presentations.

It was also thanks to technology why schools can show video clips or educational movies to students easily. It is simply a tool which educational institutions must bring in the future.

### **The Importance for Health**

The most important thing for medicine is to identify a disease as quickly as possible. This information will help to prescribe treatment fast.

There are many diseases that still have no cure and there are many treatments for diseases that still need to be improved. In the past, diseases were difficult to identify because doctors didn't have the tools to do so. Nowadays, an hour is already enough to identify any sickness of a patient.

### **Importance for Businesses**

The way companies of all sizes do business is changing largely because of advancements in information technology. From new technological devices like tablet computers, Smartphones, to increasingly advanced applications, software and communication networks, the workforce is becoming a more global entity that puts more companies on equal footing with access to information anywhere in the world.

### **Importance for Tourism**

Information Technology in Tourism makes easier many of the processes and allows professionals to process the necessary information rapidly. The use of modern information technologies in tourism provides a significant improvement of the quality of economic information. In addition, the increased data rate, their objectivity and, as a consequence make timely management decisions. The main advantage of modern computer technology –it's the ability to manage the travel company quickly and effectively.
